

Attitudes & Values

Levels: 1, 2 and 3

Subject: Diabetes is not about...

TEACHER

STUDENTS

www.fundaciondiabetes.org

Many of the attitudes, at school, that affect students with diabetes, have become distorted by misconceptions regarding this illness, mostly, due to insufficient information and erroneous interpretations.

It, often, happens that important issues are passed over, simply, because it is, generally, assumed that everyone knows what's going on. Such false impressions can make it hard for a child, with diabetes, to understand why some people behave the way they do, towards them.

The sooner students and teachers, alike, understand the true dynamics of diabetes, the sooner actions and reactions surrounding this condition will make better sense, to everyone involved.

In this unit, we unveil some of the more frequent mistaken assumptions.

We suggest teachers use the Audio Tale "Andrew has it all wrong" in conjunction with its related activities, in order to approach the topic in the most effective manner possible.
